

Biocuration and rule-based modelling of protein interaction networks in KAMI

Sébastien Légaré, Eugenia Oshurko and Russ Harmer

LSB 2018 - Oxford

Introduction

What does **KAMI** stand for?

Knowledge **A**ggregator and **M**odel **I**nterpreter

What is special about KAMI ?

- Rule-based strategy
- Incremental aggregation of large models
- Allows *a posteriori* understanding of models

Outline

KAMI

- 1) KAMISudio (KAMI GUI)
- 2) Knowledge representation (Nugget / ActionGraph)
- 3) Building a model

Kappa

- 4) Rule-based executable model
- 5) Pathway discovery (Causality analysis)
- 6) The pYnet model

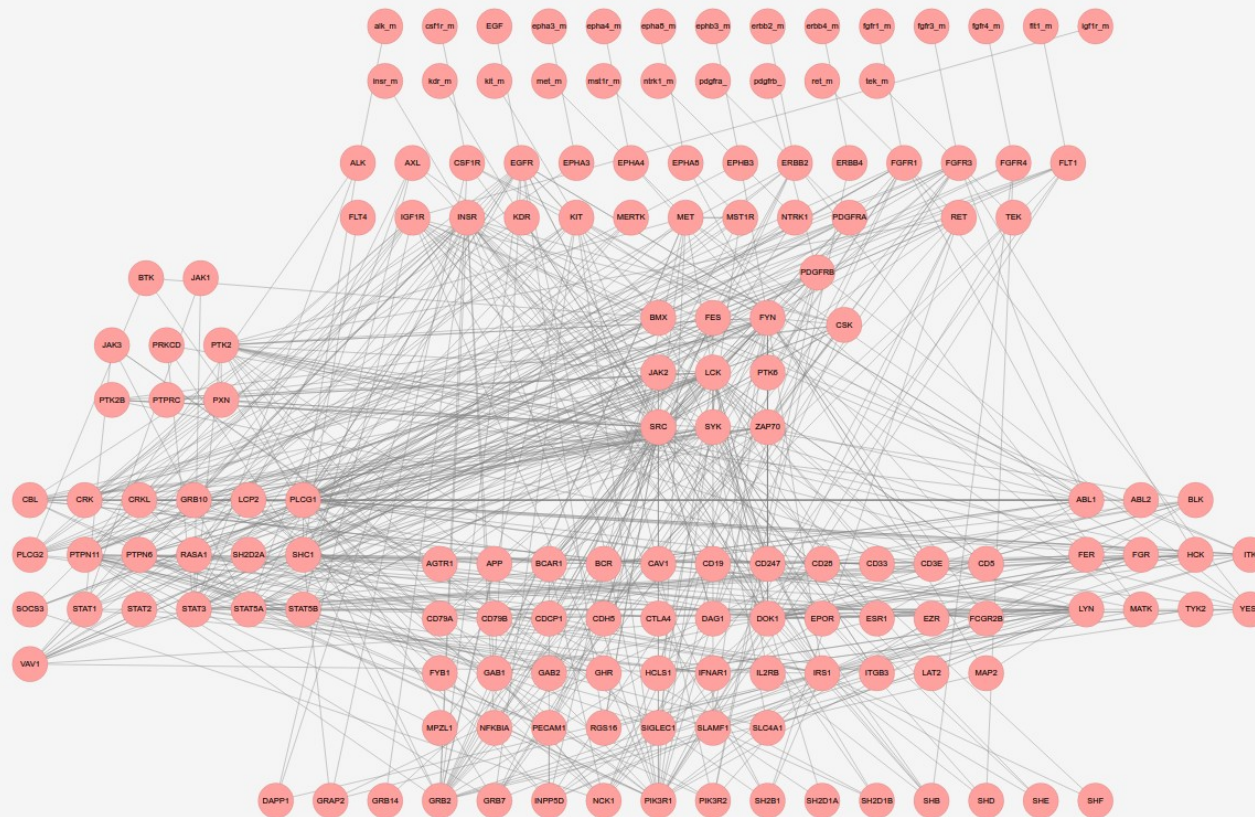

Do: True:
Be: False:

Show All Nodes:

action_graph

nuggets rules variants

- 10 FGFR1 phosphoryl
- 0.01 RETtk unbinds
- 0.01 LCKtk unbinds
- 10 BTK phosphorylate
- 0.01 SYKtk unbinds
- 0.001 INSR-INSR dis
- 10 CSK phosphorylate
- inf JAK2tk binds SOC
- 0.0001 SRCtk binds
- 0.001 FGFR4-FGFR4
- 0.0001 GRB2sh2 bind
- 0.01 LYNtk unbinds
- 0.0001 GRB2sh2 unbi
- 0.0001 GRB2sh2 unbi

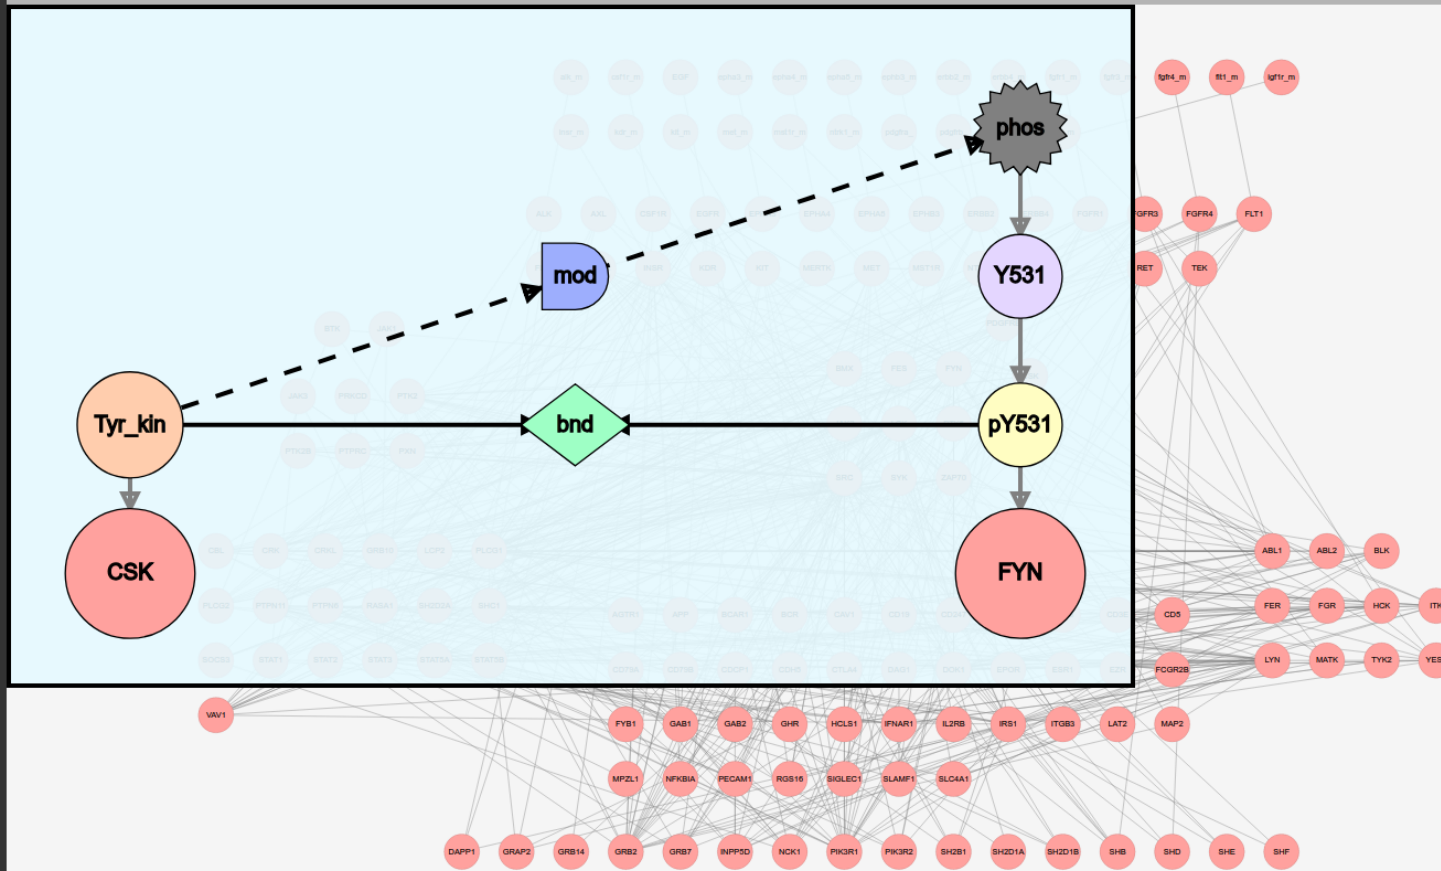

Do: True:
Be: False:

Show All Nodes:

action_graph

nuggets rules variants

- 10 FGFR1 phosphoryl

- 10 CSK phosphorylates
- 0.0001 FYNsh2 unbinds
- 0.0001 FYNtk binds
- 10000 phosphorylates
- 0.0001 FYNsh2 unbinds
- 0.0001 FYNsh2 unbinds
- 10 FYN phosphorylates
- 0.01 FYNtk unbinds
- 0.0001 FYNsh2 unbinds
- 10 FYN phosphorylates
- 0.01 FYNtk unbinds
- 0.0001 FYNsh2 binds

✖ FYN_filter

Knowledge representation

Split in two layers, the nuggets and action graph

- Unambiguously specify interactions
- Limited set of symbols

Can read a model using KAMISStudio

Every nugget is independent

- Facilitates incremental aggregation

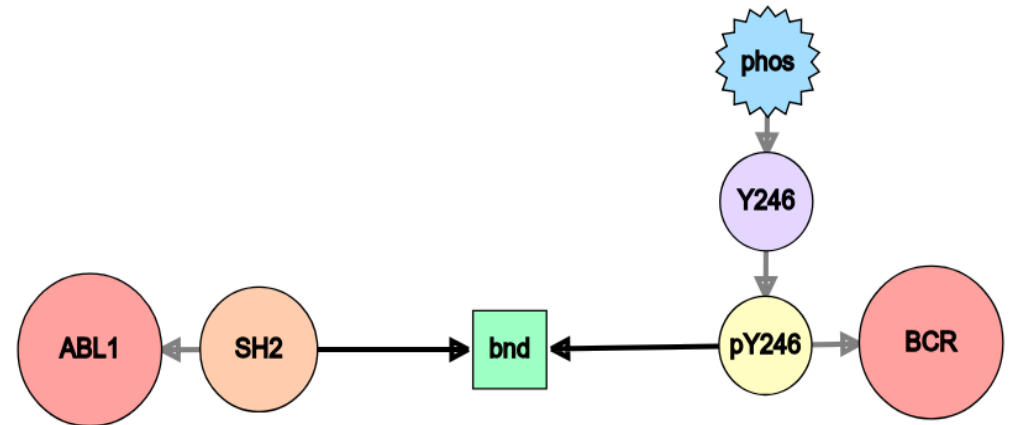

Building a KAMI model

KAMI interaction (programmatic)

```
Binding(  
  RegionActor(  
    gene=Gene(uniprot_ac="P00519",  
              hgnc_symbol="ABL1"),  
    region=Region(name="SH2",  
                  interproid="IPR000980")  
  ),  
  SiteActor(  
    gene=Gene(uniprot_ac="P11274",  
              hgnc_symbol="BCR"),  
    site=Site(name="pY246",  
              residues=[Residue(aa="Y", loc=246,  
                                state=State("phosphorylation", True))])  
  ),  
  rate=0.001,  
  desc="ABL1 binds BCR-Y246"  
)
```

KAMI nugget (graph representation)

How does it work?

KAMI graph hierarchy

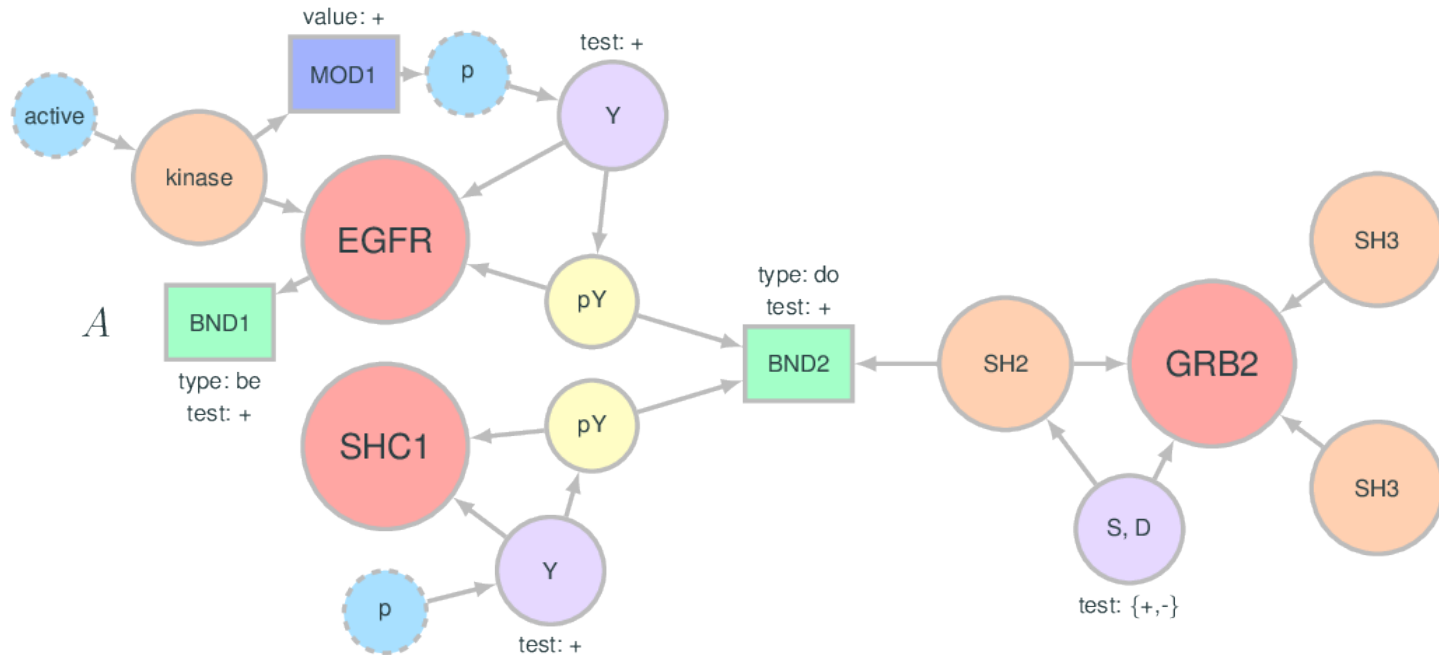

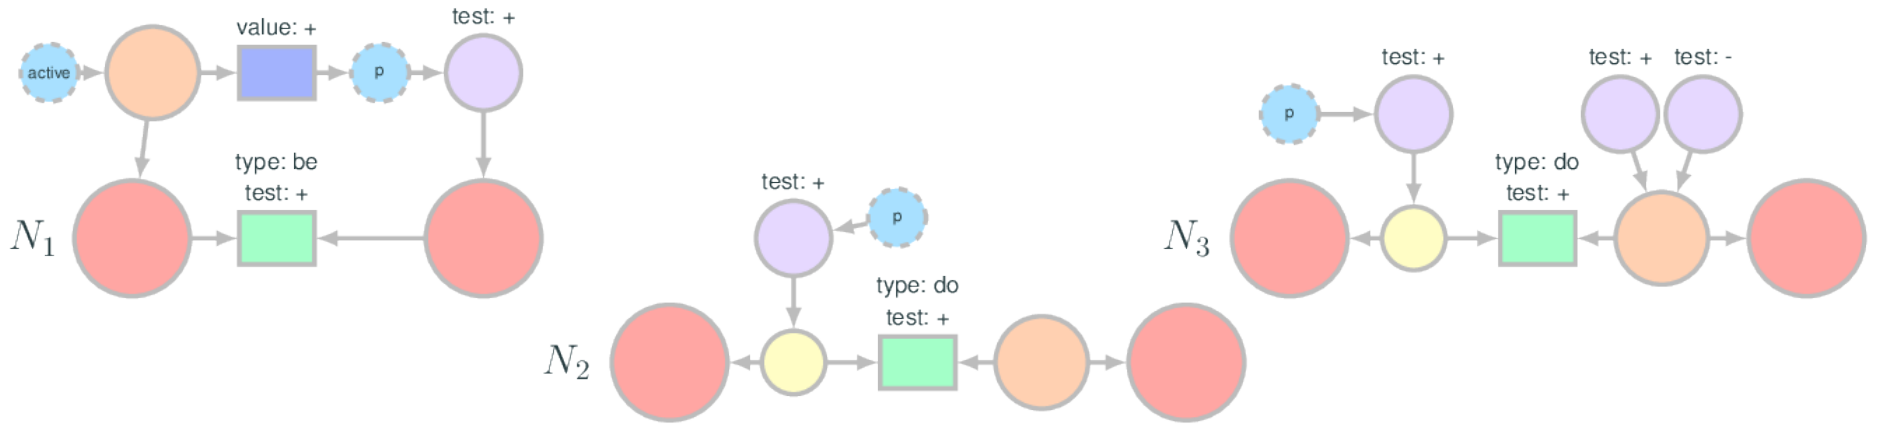

\vec{N} : Nugget

A : Action Graph

Arrow : Typing

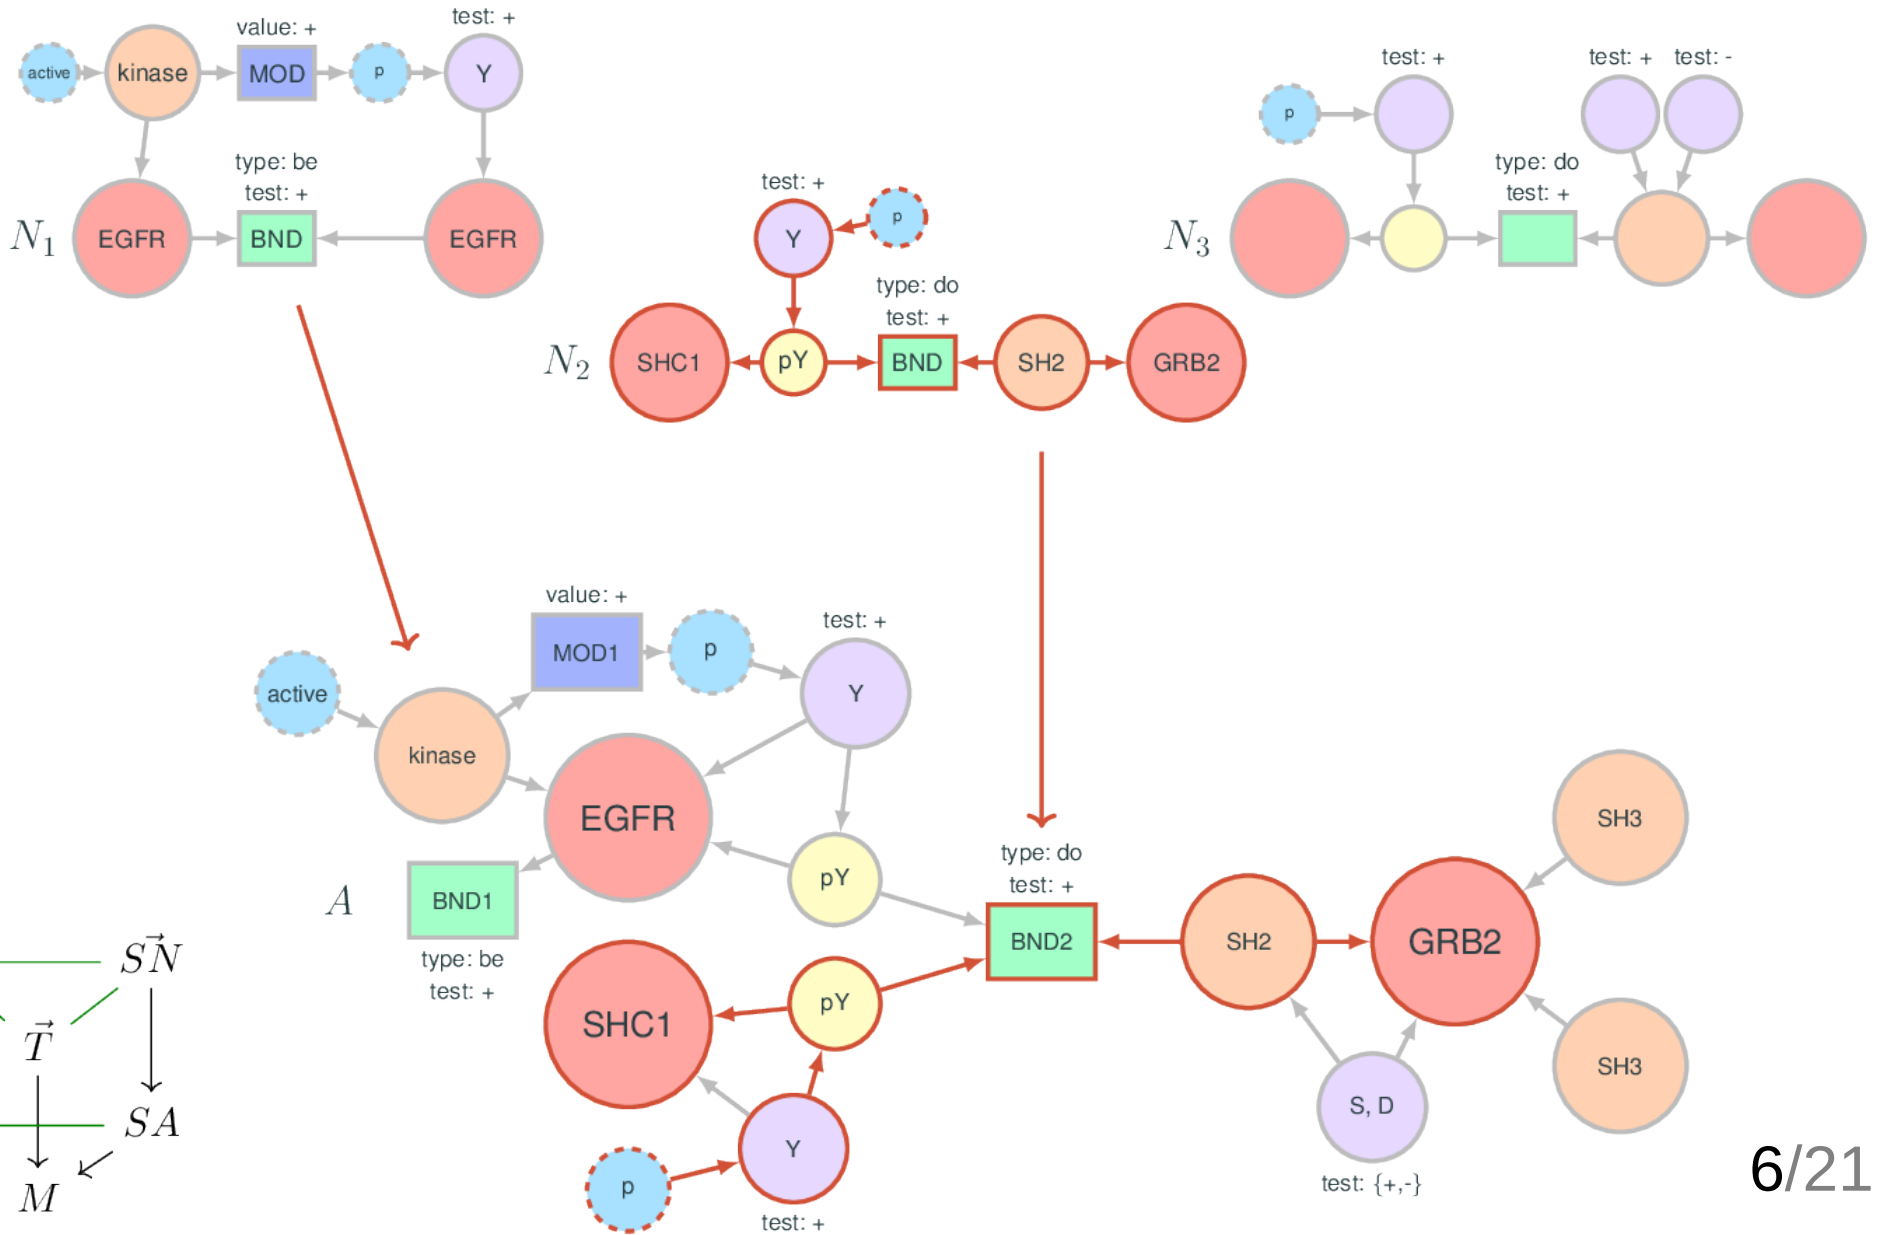

Typing

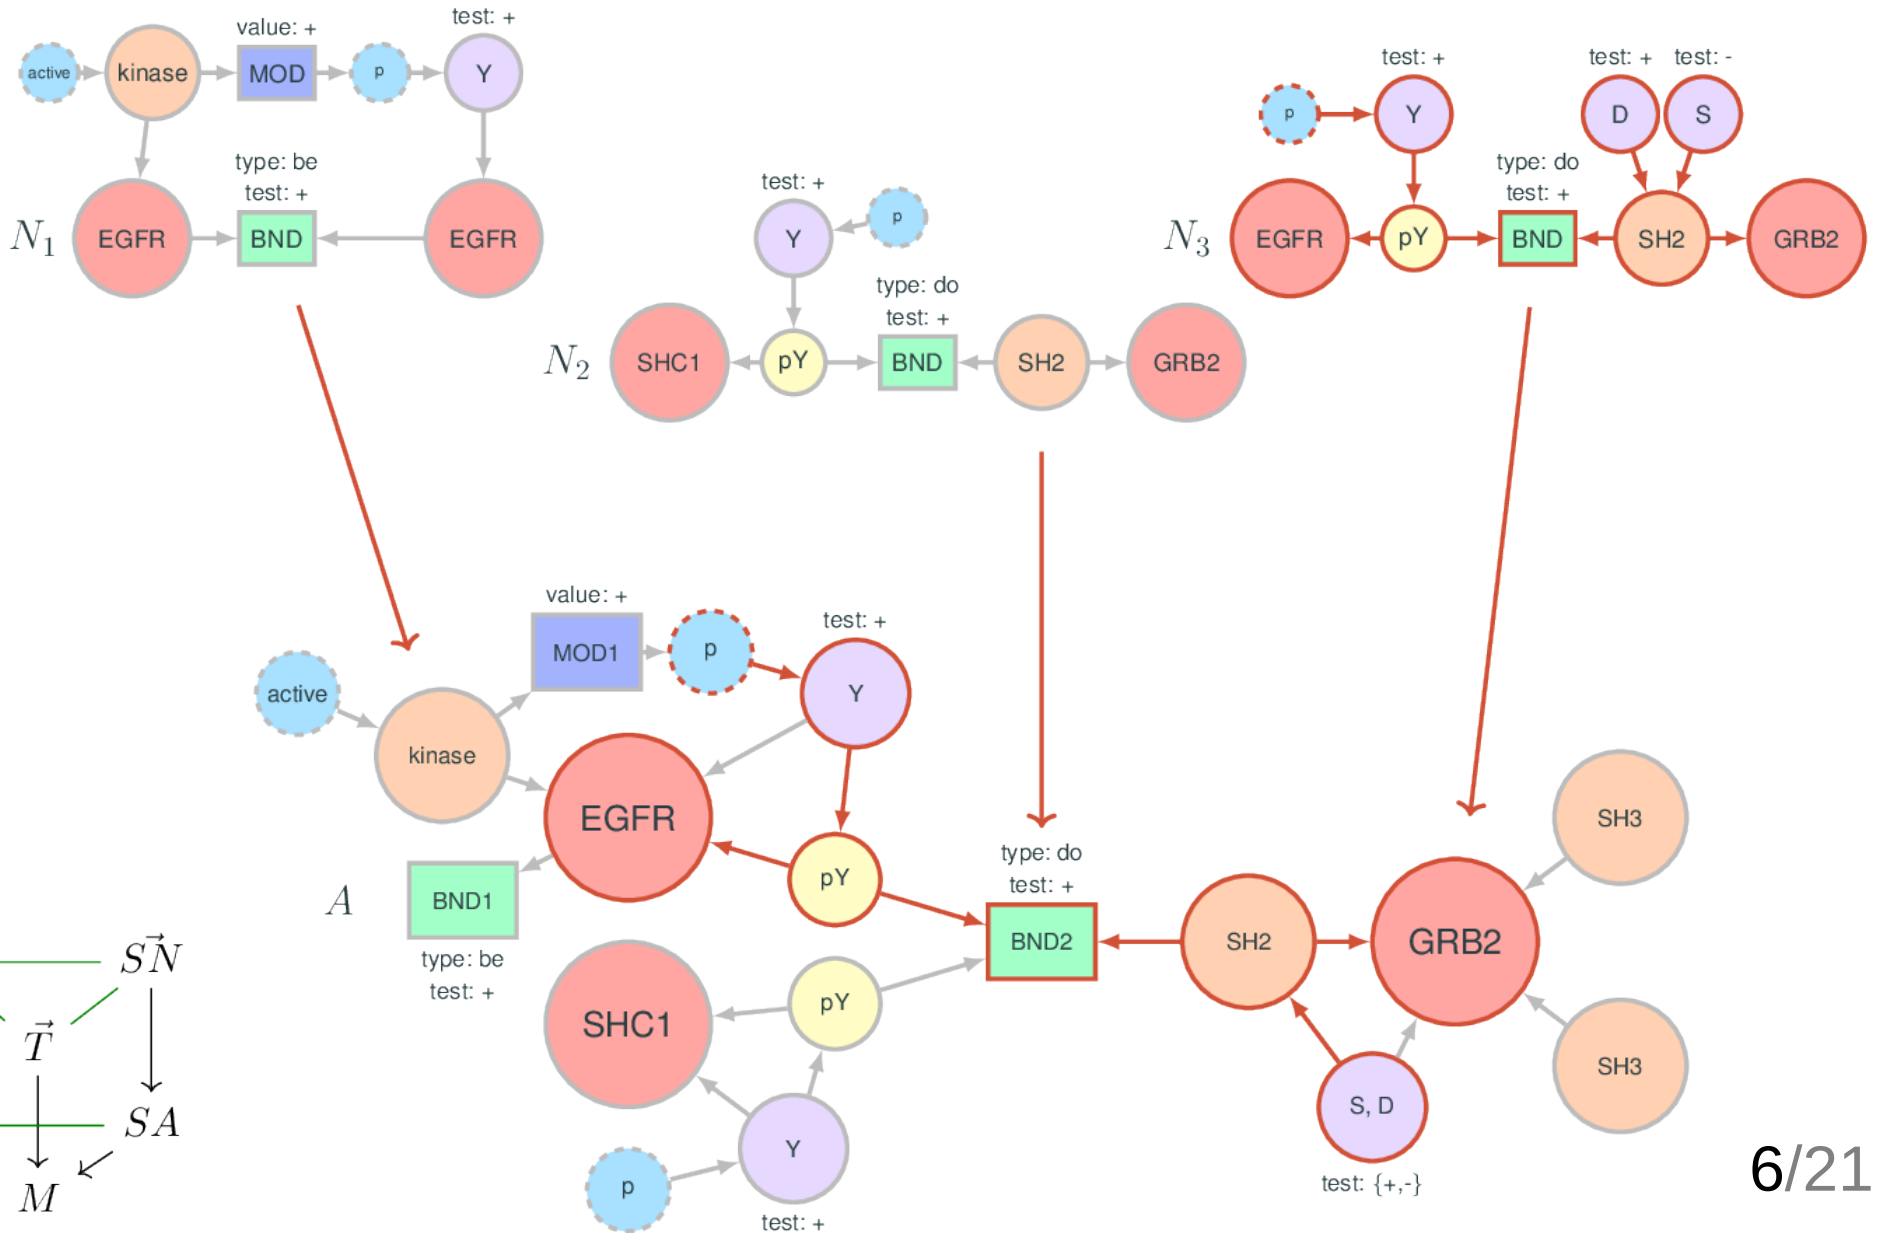

Typing

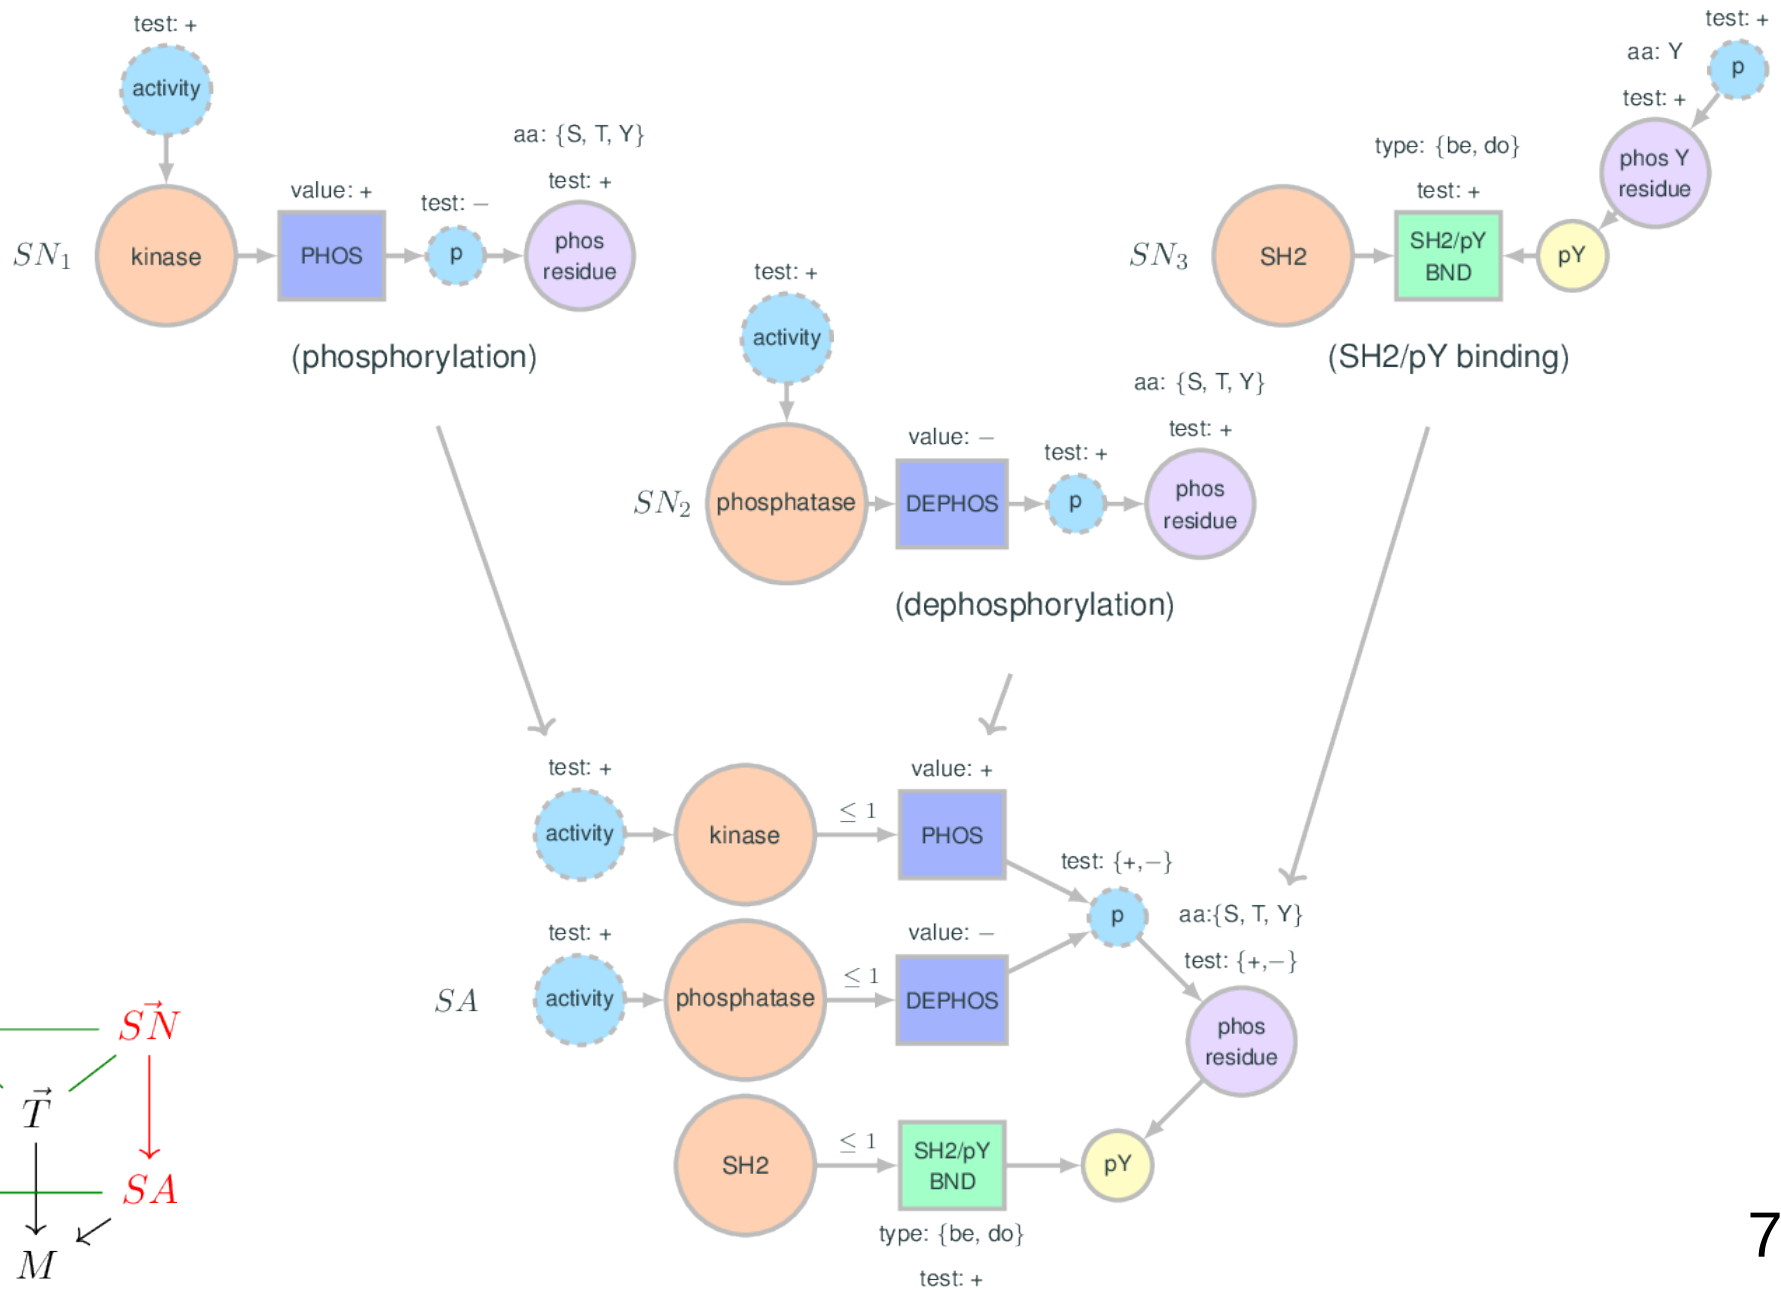

Typing

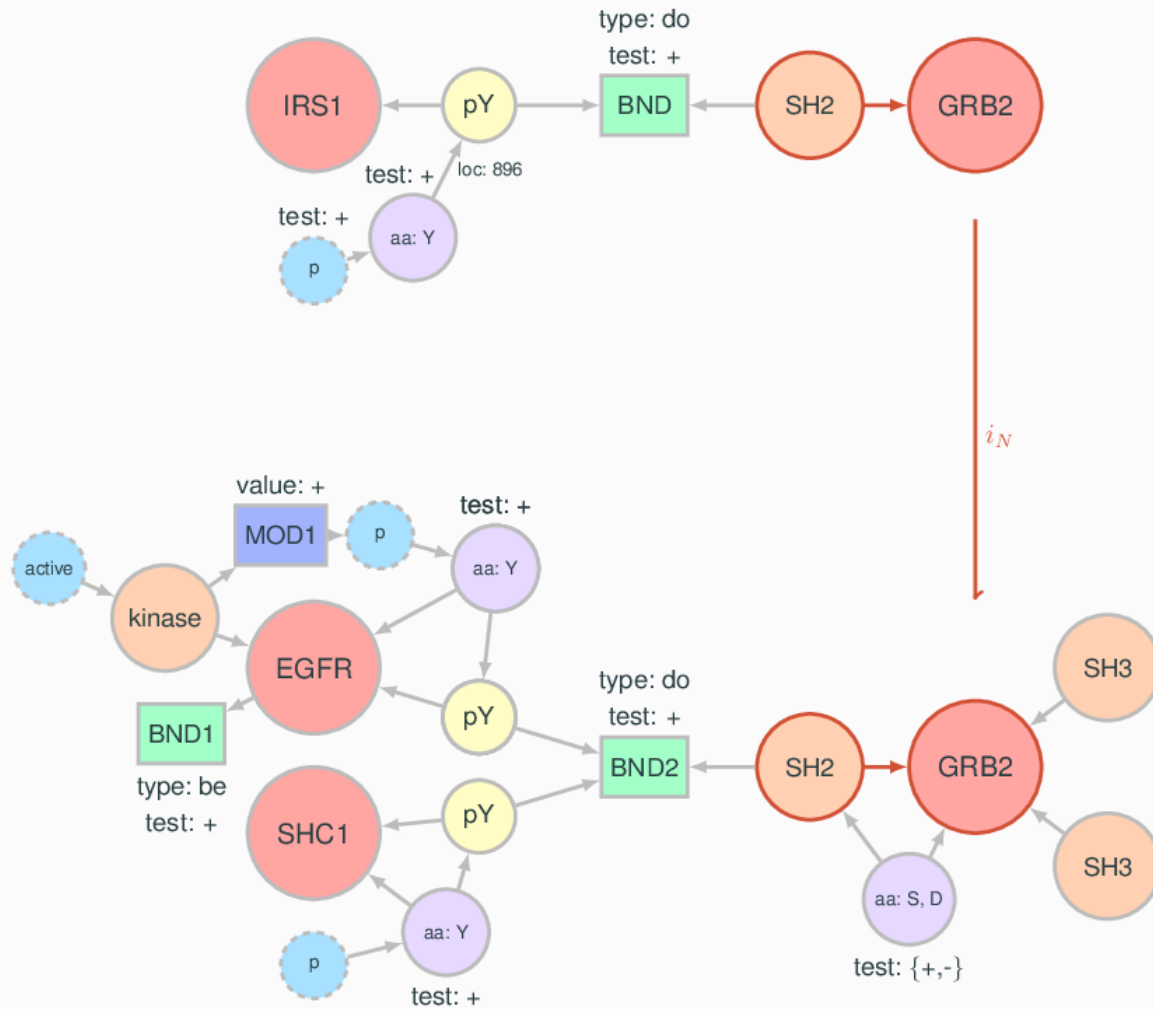

Typing

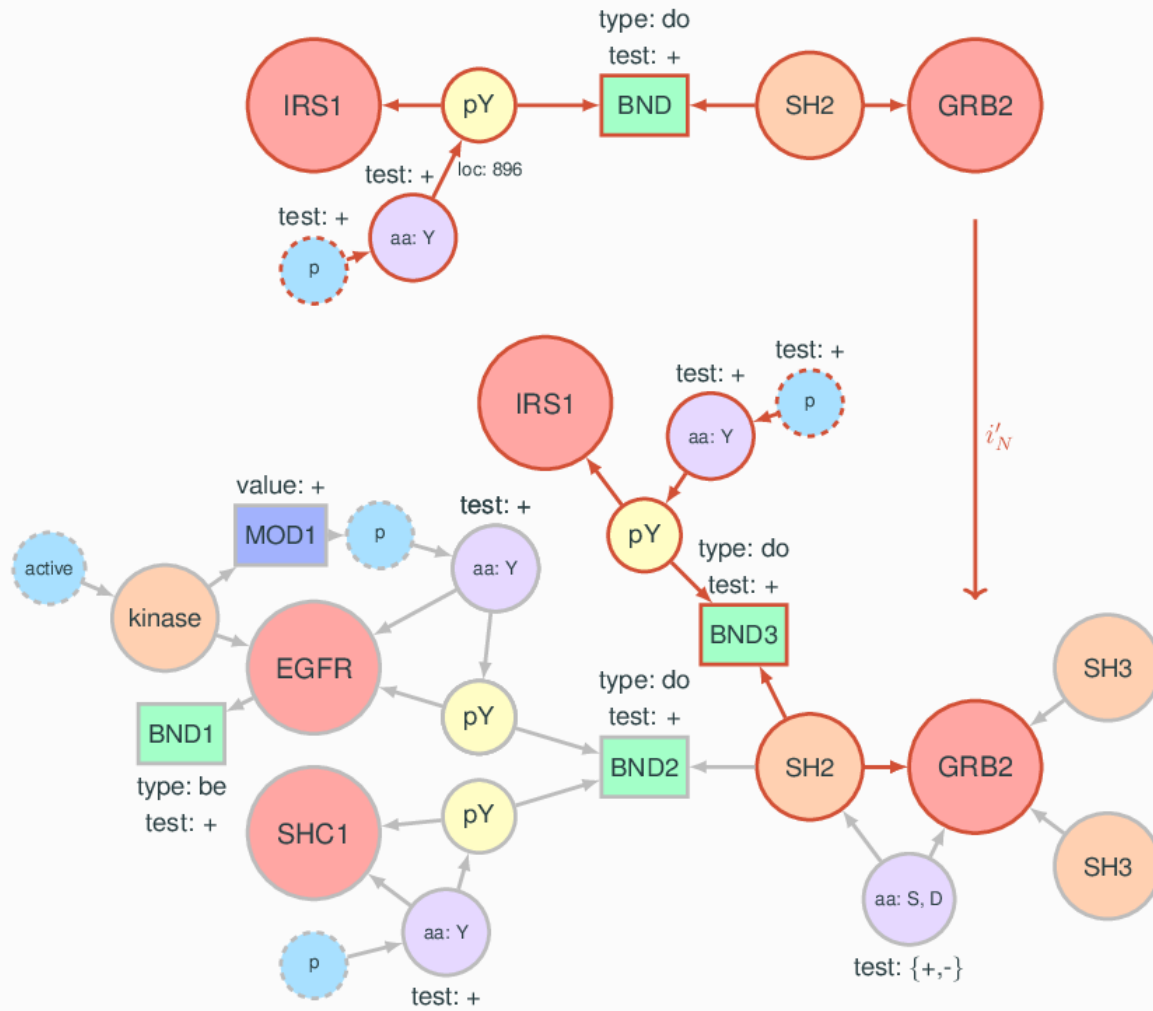

Semantic nuggets

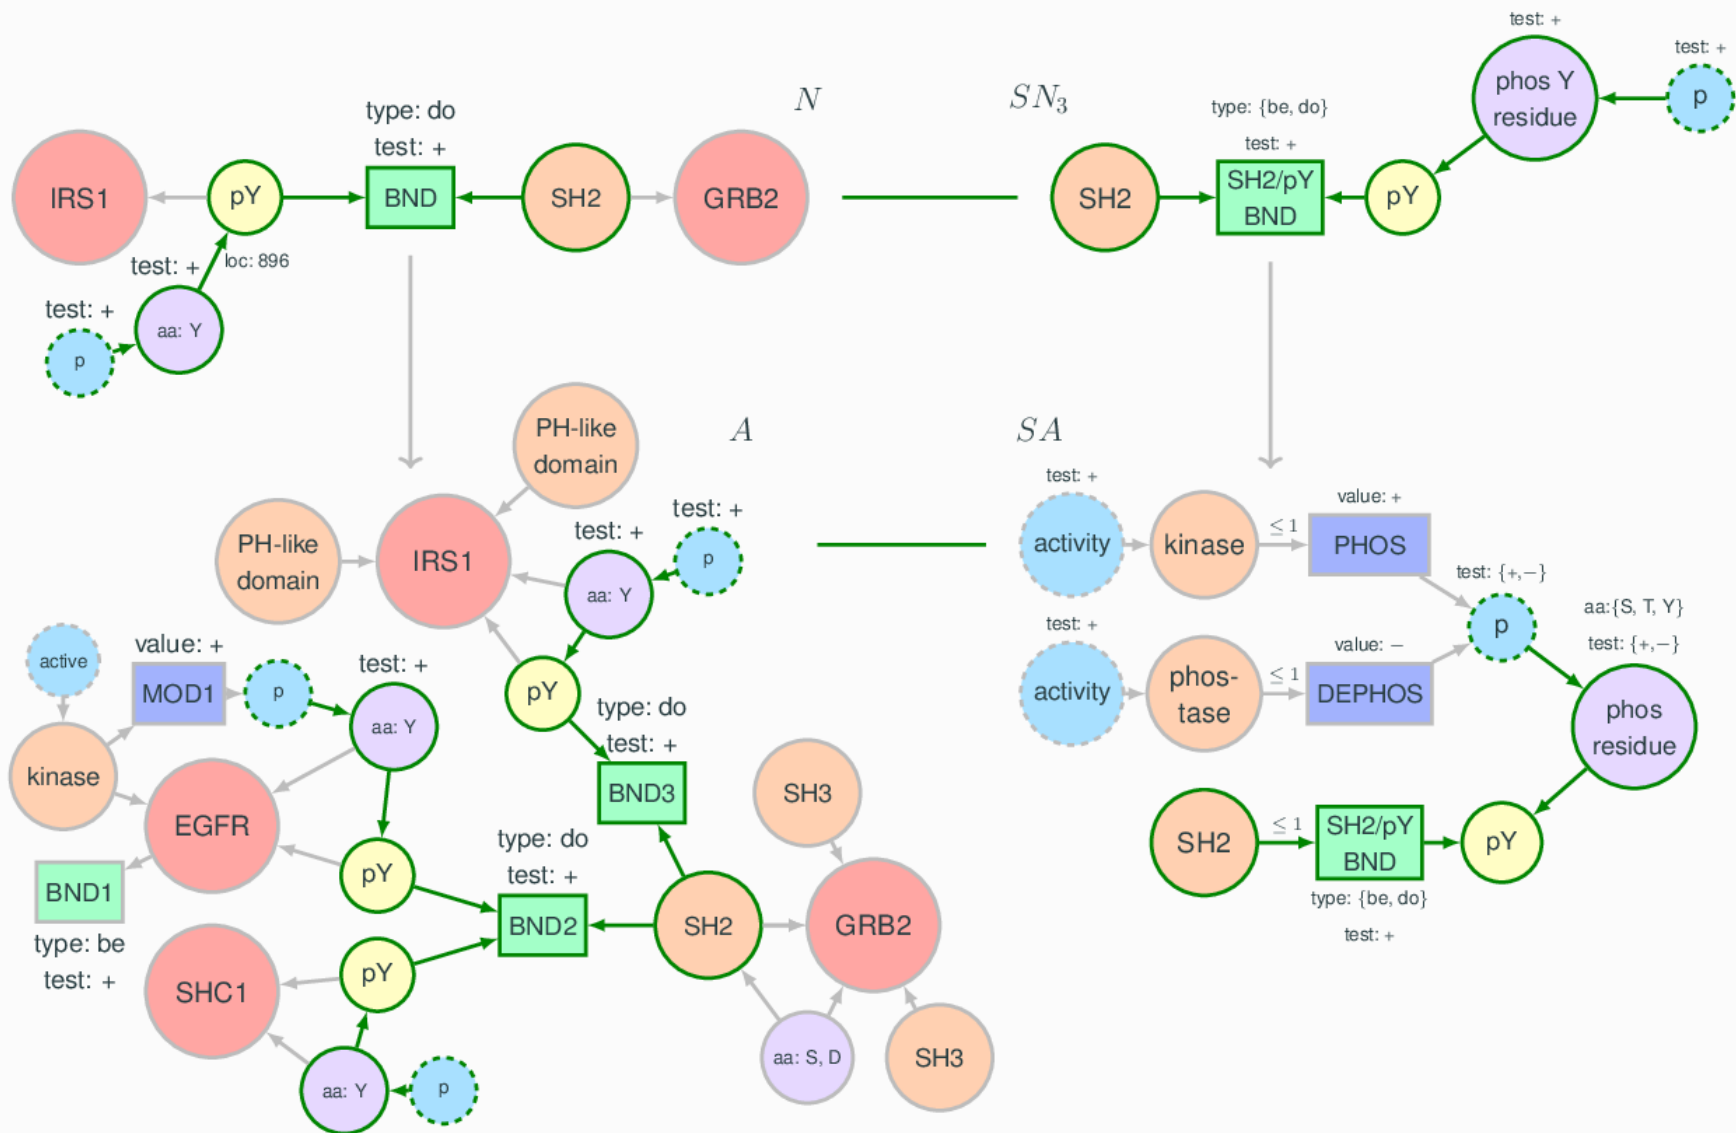

Knowledge aggregation

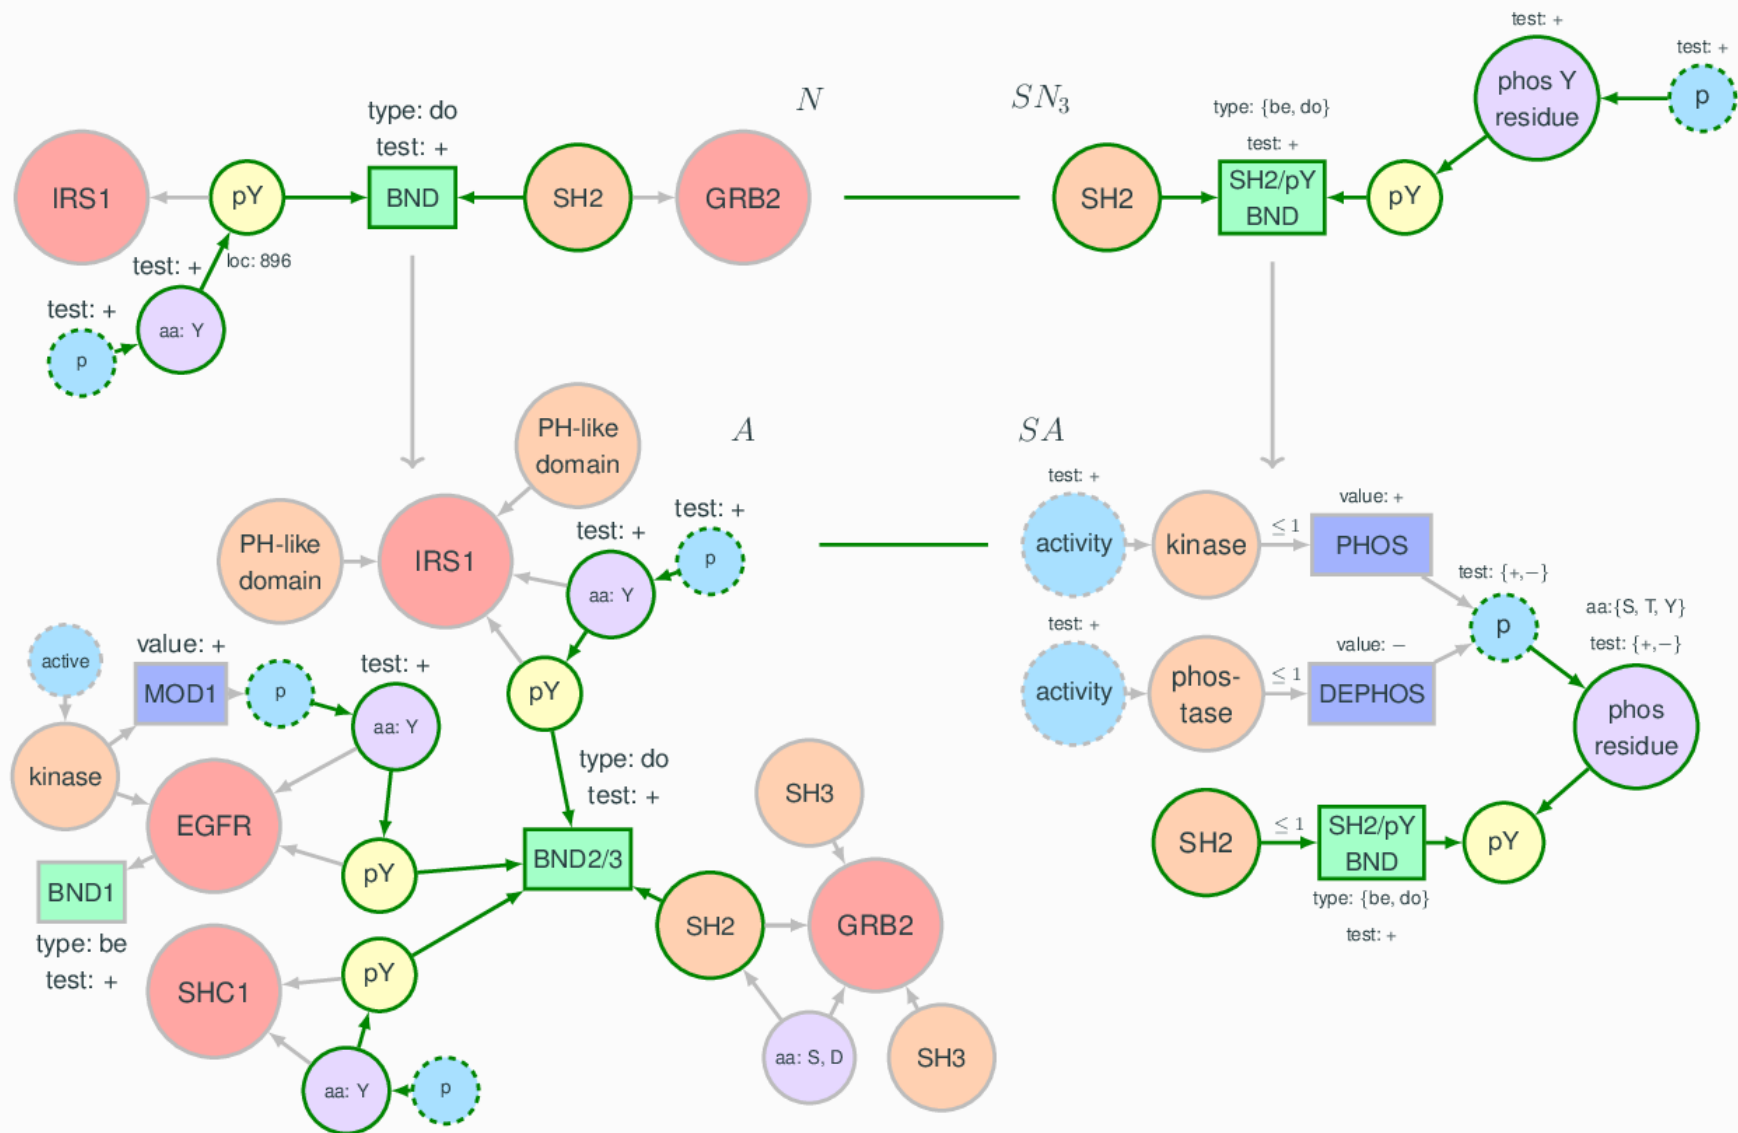

Knowledge aggregation

Knowledge aggregation (continued)

Knowledge aggregation (continued)

Biocuration with KAMI

Allows users to easily add new data

- Detects elements already present in action graph
- Semantic checks
- Completes interaction if more detailed
- Ignores new data if it already exists

Kappa rule-based model

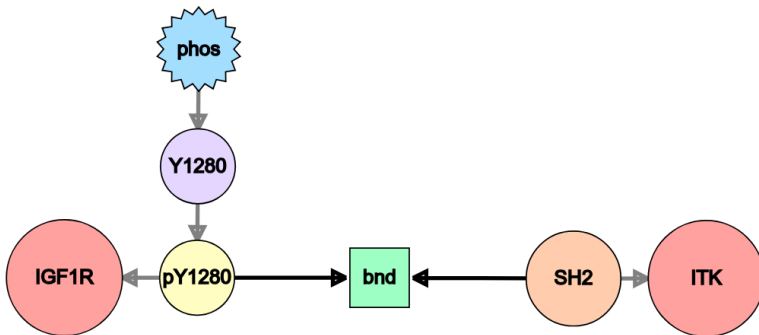

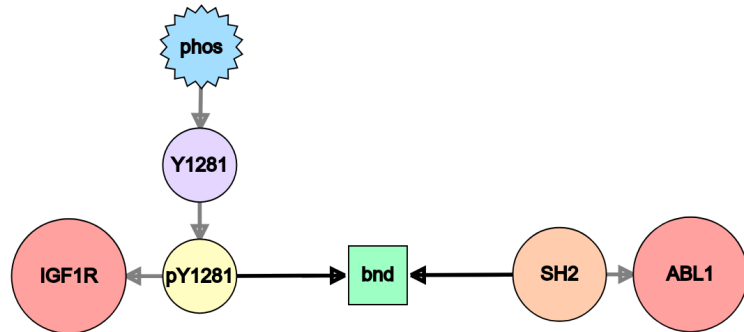

KAMI nugget

Kappa rule **ABL1(SH2[./1]), BCR(pY246[./1] Y246_phos{True})**

1 nugget \approx 1 rule (info from AG)

`IFGR1(pY1281[./1] Y1281_phos{True}), ABL1(SH2[./1])`

`IFGR1(pY1280[./1] Y1280_phos{True}), ITK(SH2[./1])`

1 nugget \approx 1 rule (info from AG)

Nuggets

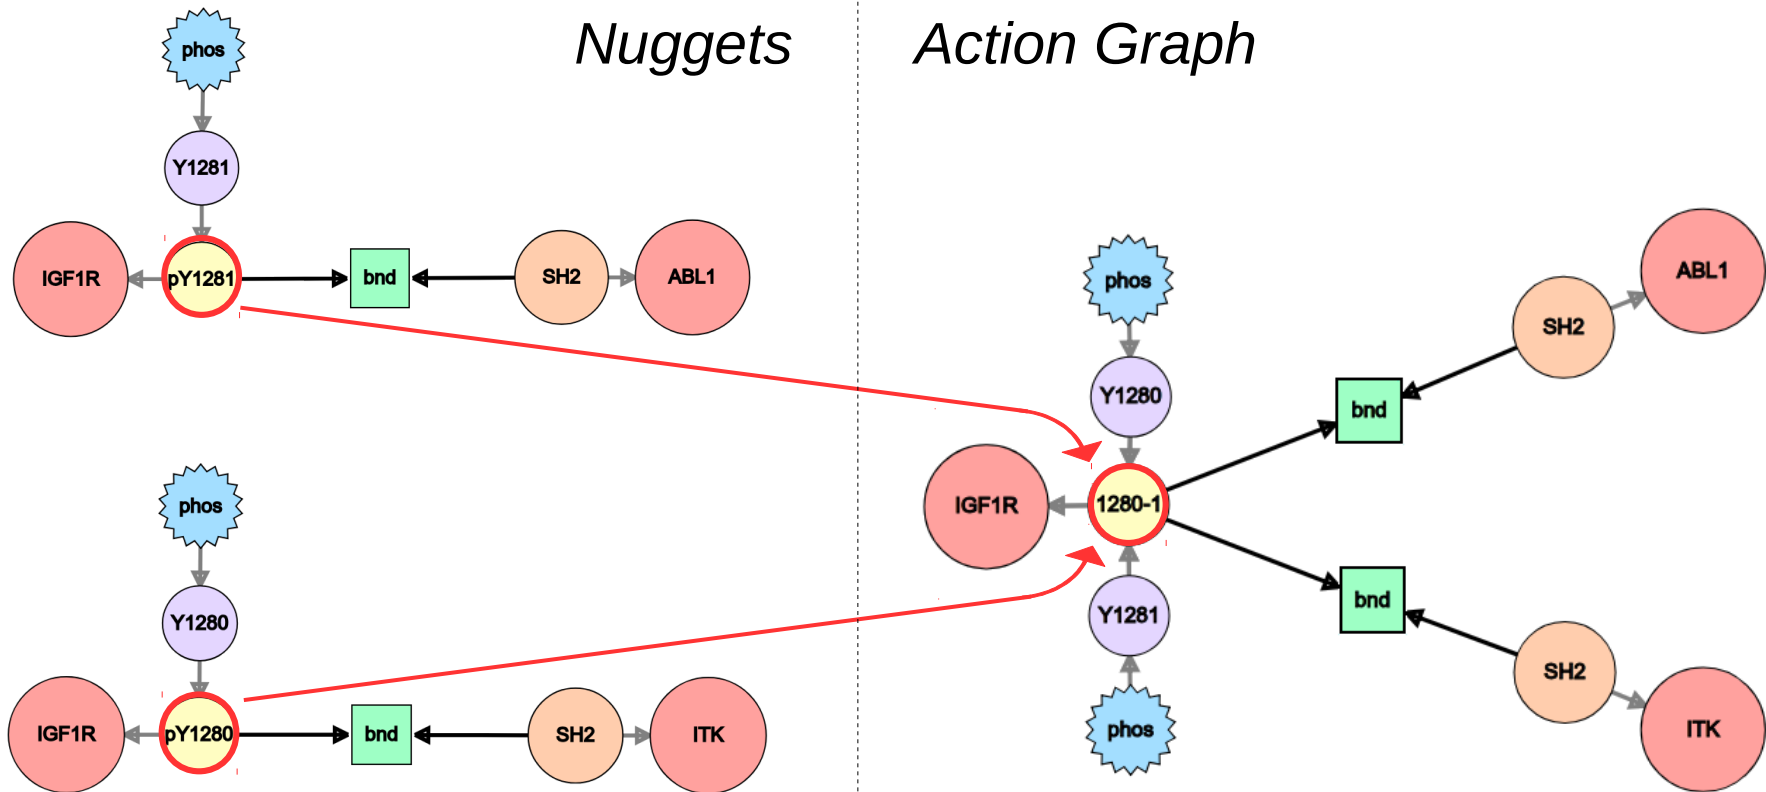

Action Graph

`IFGR1(pY1281[./1] Y1281_phos{True}), ABL1(SH2[./1])`

`IFGR1(pY1280[./1] Y1280_phos{True}), ITK(SH2[./1])`

1 nugget \approx 1 rule (info from AG)

IFGR1(**pY1280-1**[./1] Y1281_phos{True}), ABL1(SH2[./1])

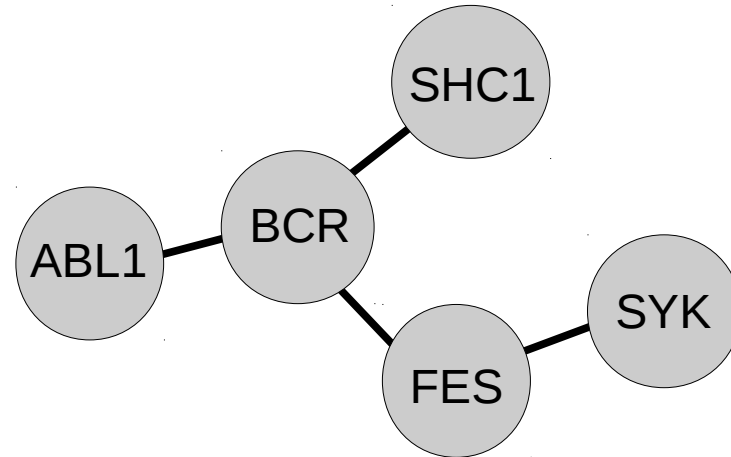

||

IFGR1(**pY1280-1**[./1] Y1280_phos{True}), ITK(SH2[./1])

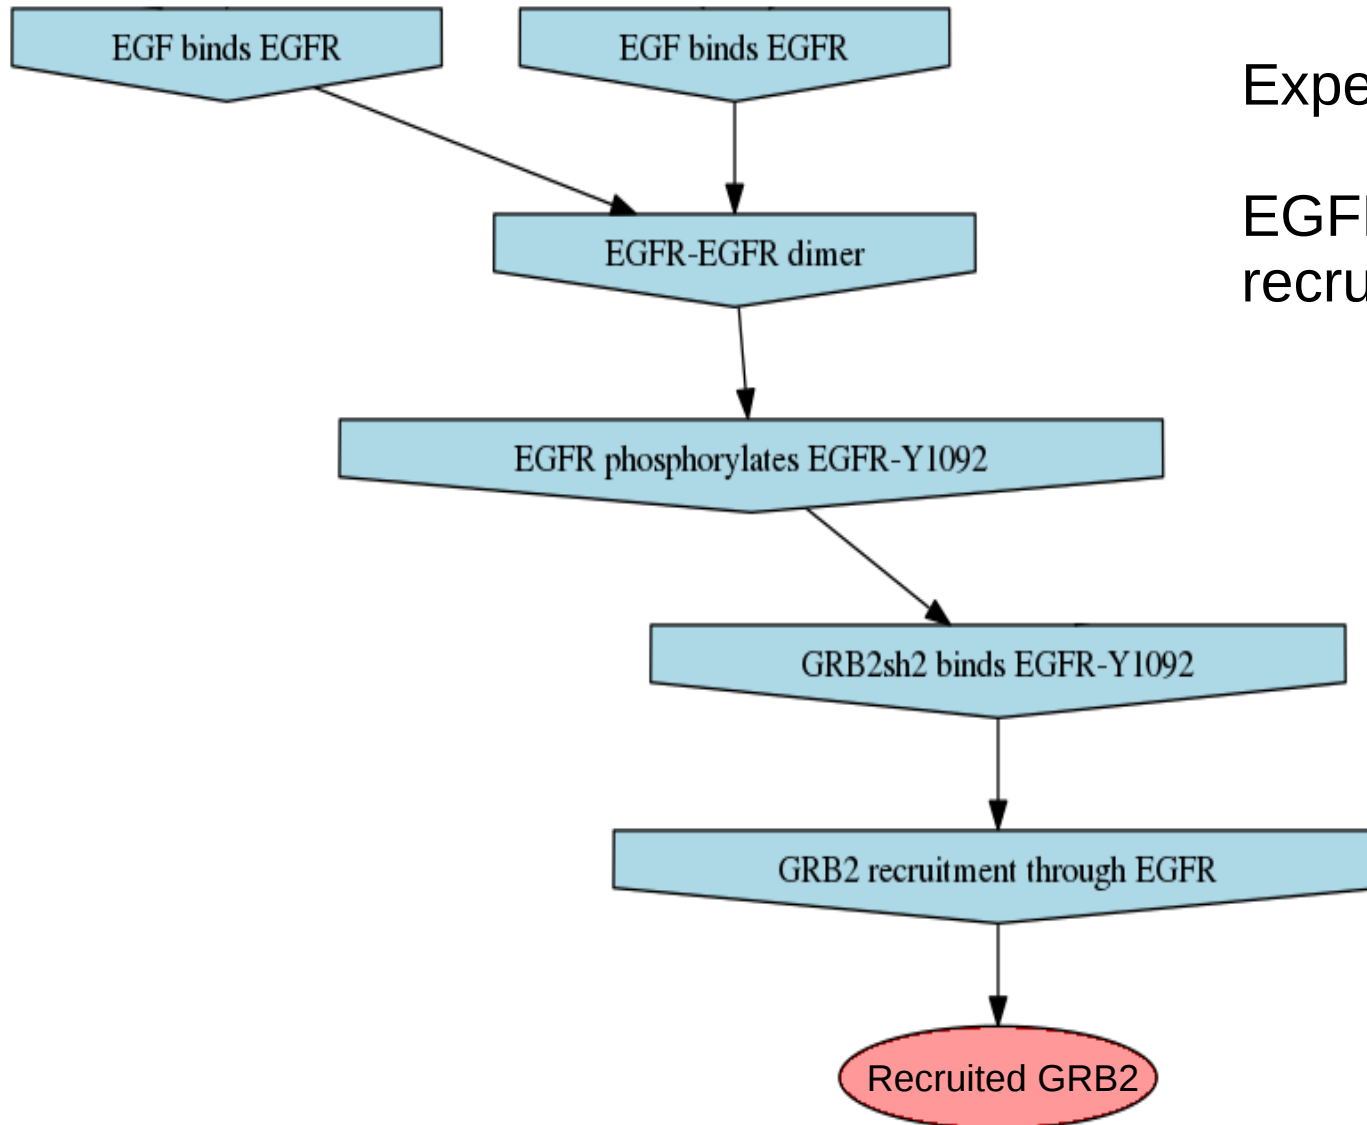

Simulations with KaSim

- Rule-based
- Deals with combinatorial complexity
- Quantitative
- Stochastic
- No spatial dimension
- Analysis system dynamics

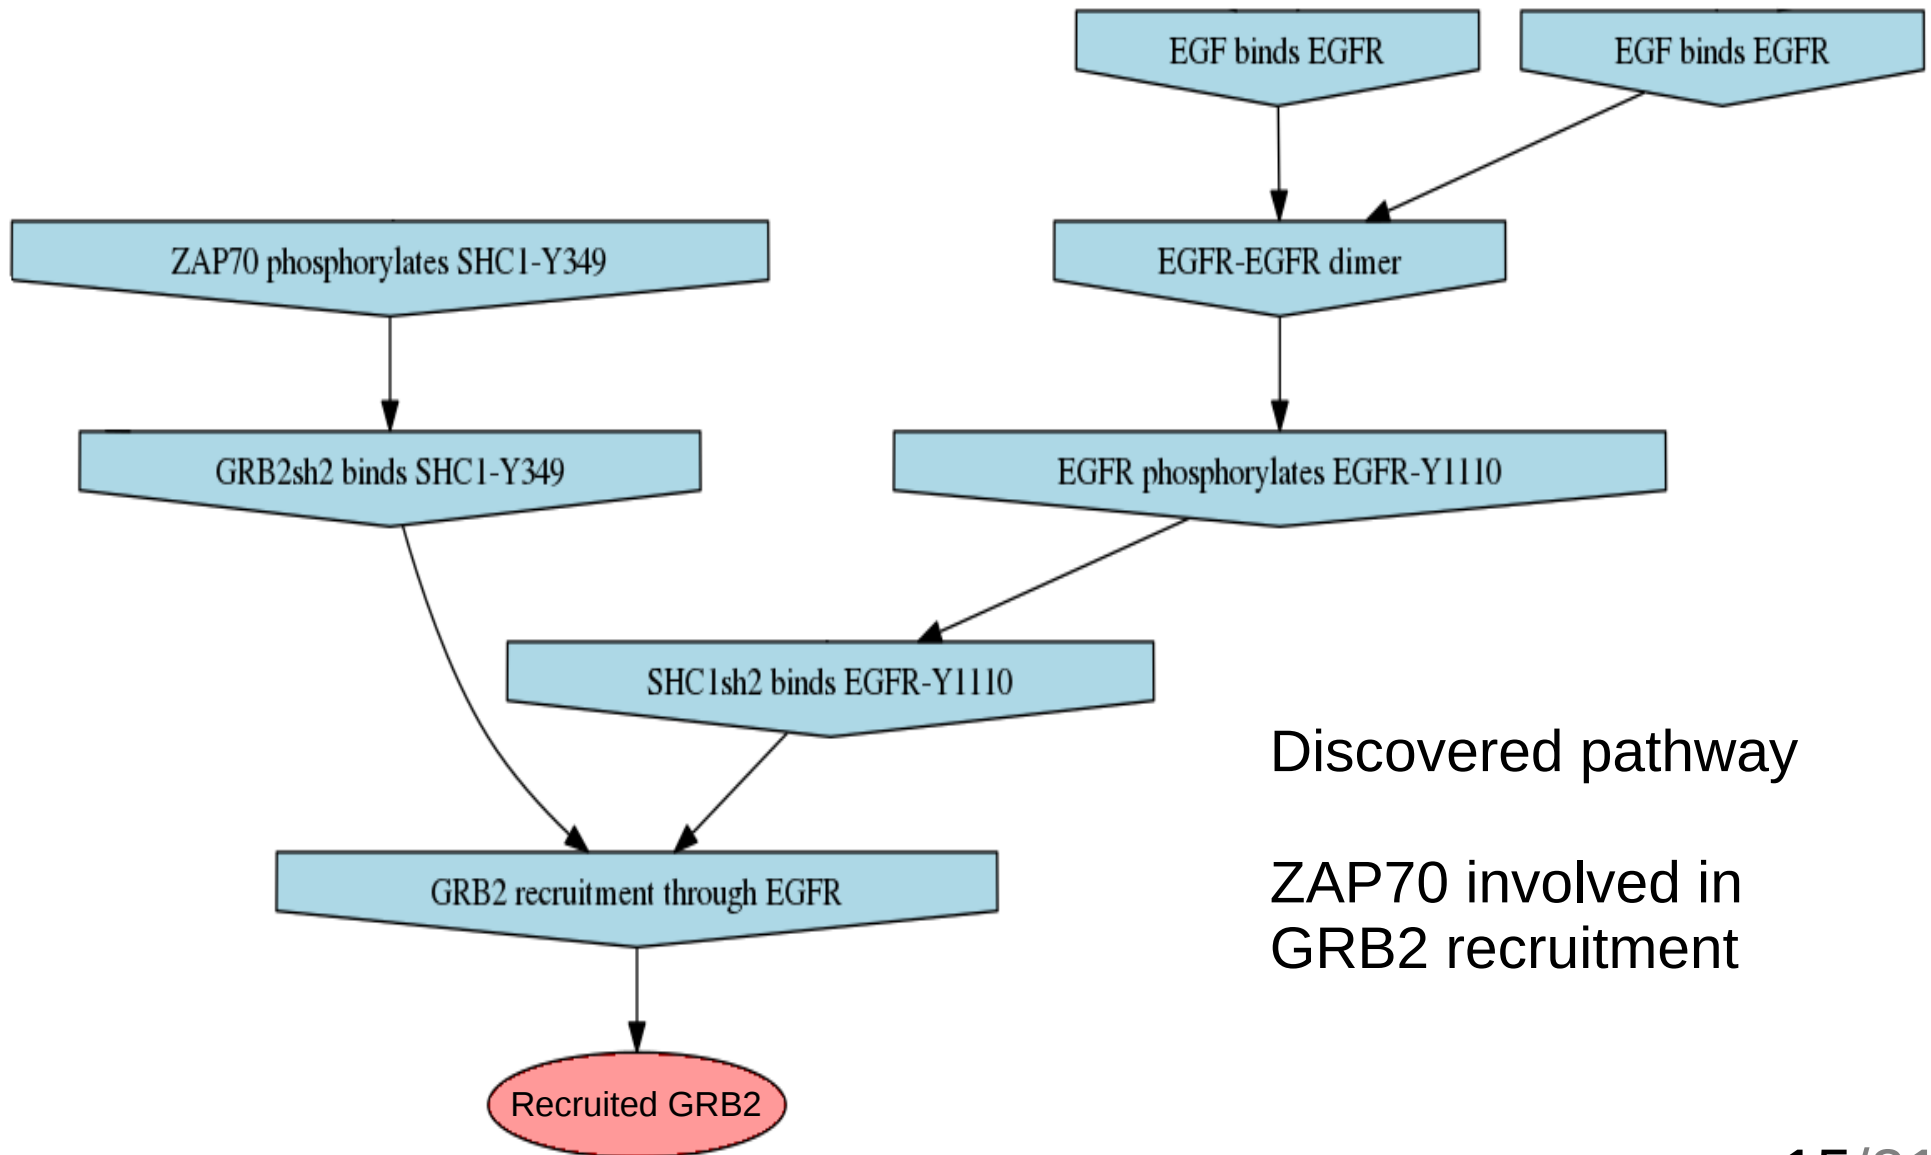

Causality Analysis (KaStor)

Expected pathway

EGFR dimerizes and recruits GRB2

Causality Analysis (KaStor)

The pYnet model

Cell signaling

- Tyrosine phosphorylation
- SH2 domain bindings

900 interactions extracted from

- PhosphoSite
- Phospho.ELM
- NCI Pathway Interaction Database

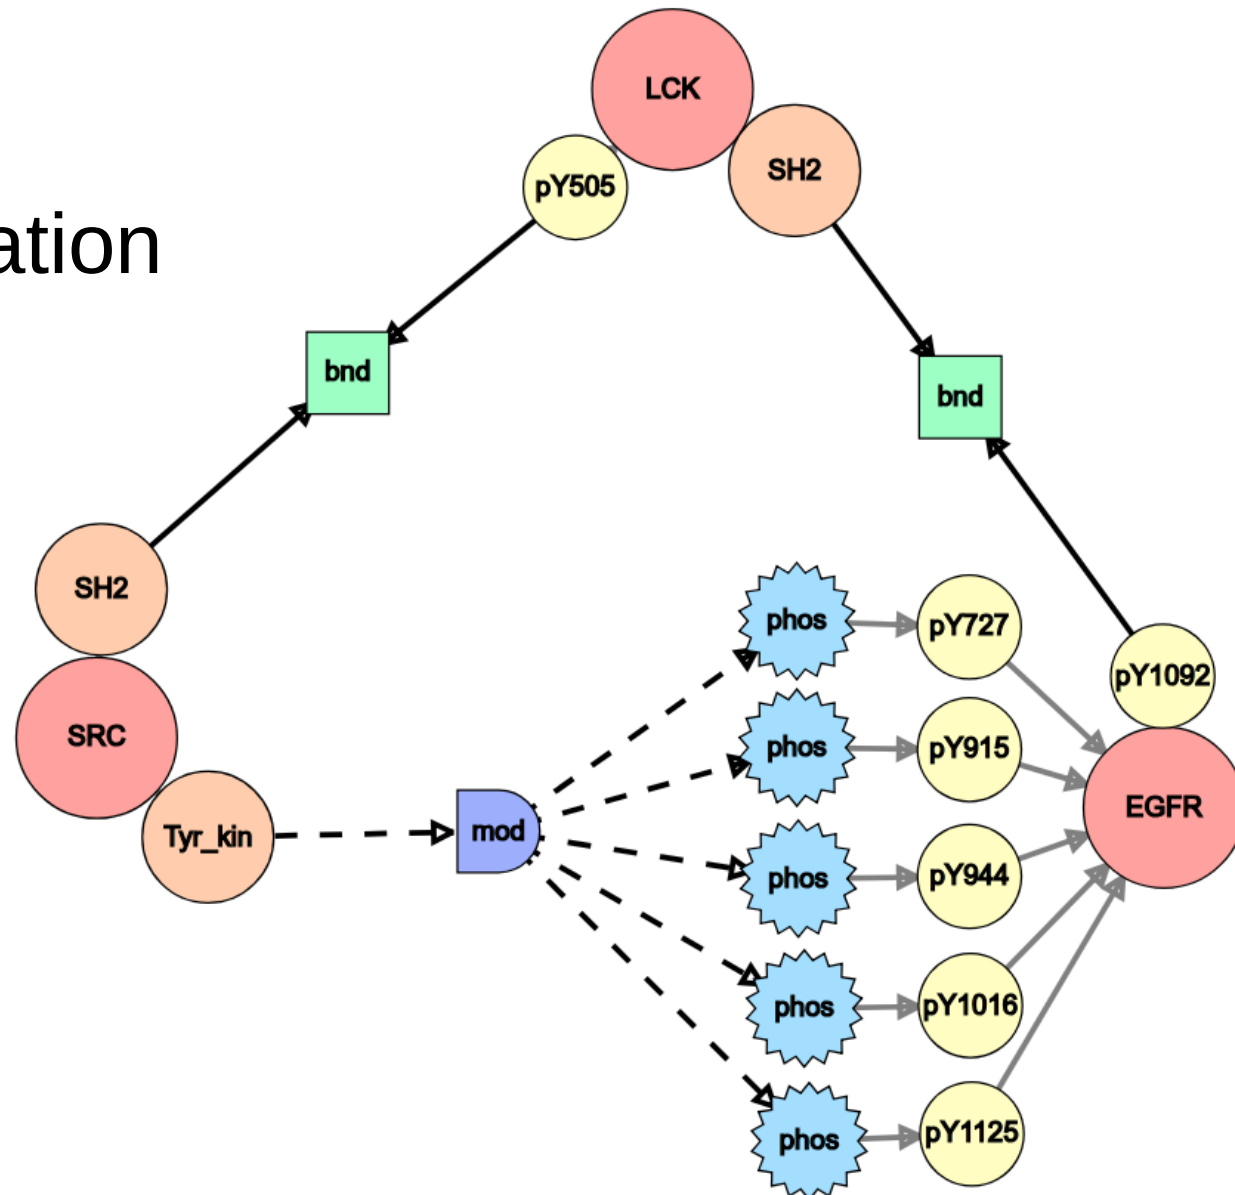

Well suited to showcase rule-based modelling

- Combinatorial complexity
- Large
- Scaffolding

Important combinatorial compl.

Processive phosphorylation

Summary

KAMI allows

- Representation of individual interactions
- Aggregation into an interaction network

KAMI works with Kappa to

- Produce dynamic simulations
- Discover pathway using causality analysis

Summary

Fundamentally different approach to modelling

- No need to know exactly where new data fits
- Can just “smash” interactions together
- No need to explicitly build the pathways (bias)
- Can discover the pathways through analysis

Using KAMI and Kappa

In development

KAMI: github.com/Kappa-Dev/KAMI

KAMISudio: github.com/Kappa-Dev/KAMISudio

Graph rewriting

ReGraph: github.com/Kappa-Dev/ReGraph

Kappa
